Dear Mr. President and Members of the National Security Council:

Attached, please find a letter, endorsed by more than 1000 faculty and scholars from U.S. universities expressing our hope that the United States will extend the Protocol between the U.S. and China on Scientific and Technological Cooperation that is scheduled to expire on August 27, 2023. We only became aware of the issue a week ago, at which time we wrote the attached letter and invited faculty and scholars from U.S. universities to join us by endorsing it. We believe that the speed with which this letter gathered endorsements, and the level of distinction of the endorsers, reflects the strength of the support for extending this agreement.

In this cover letter, we would like to mention a few additional points - and here we are speaking for ourselves only, and not necessarily for those who have endorsed the letter.

On Monday, August 19, when we began soliciting endorsements, there was an expectation reported in the press that the agreement would likely not be extended. However, on Wednesday, a State Department spokesperson [reportedly](#) told NBC News that there is likely to be a six-month extension to keep the agreement in place as the U.S. seeks "authority to undertake negotiations to amend and strengthen the terms" of the agreement.

We applaud such an extension and appreciate the Administration's commitment to negotiate. We do not want to minimize the importance of the issues concerned, for example those associated with intellectual property theft. However, from our academic perspective, research at our universities is neither proprietary nor does it deal with classified information. Among the most important objectives of academic research are the pursuit of new knowledge about the natural world and the education and training of the next generation of scientists. This activity is best carried out openly and cooperatively by engaged, principled scientists from around the world.

The attached letter reflects the considered opinion of the many outstanding US scientists who have endorsed it, and of the many more that we have not had time to contact, but whom we are sure share our perspective.

Respectfully yours,

August 21, 2023

Dear Mr. President and Members of the National Security Council:

We the undersigned are scientists and scholars at numerous U.S. universities. We are writing to express our strong support for the renewal of the United States-China Protocol on Scientific and Technological Cooperation. This agreement has been of enormous benefit to the United States.

We acknowledge that there are legitimate national security concerns that require the United States, at times, to limit access to certain research and information. However, as outlined in National Security Decision Directive 189, such information should be classified. Fundamental research at U.S. institutions of higher learning, the results of which are intended to be openly published, should not be classified in accord with NSDD 189. The benefits to the United States and to the world of robust and open research collaboration and exchanges of information and people between the United States and China has been and continues to be enormous -- every effort should be made to maintain such exchanges. We can attest that cutting off ties with China would directly and negatively impact our own research, the work of our immediate colleagues, and/or the educational mission of our universities. We are prepared to advocate for this position publicly and vocally.

We very much hope that renewal of the United States-China Protocol on Scientific and Technical Cooperation is imminent as expiration of the Protocol approaches. The Protocol has provided a valuable framework for dialogue and development of specific agreements regarding scientific and technological cooperation and exchanges between the United States and China including people-to-people connections and educational exchanges that have benefited the United States. The United States should renew the Protocol, not because China wants to, but rather because it is in the best interests of the United States.

Respectfully yours,

Steven Kivelson
