Dr. Kelvin Droegemeier, OSTP Dr. France Córdova, NSF Dr. Francis Collins, NIH Washington, DC Dr. Chris Fall, DOE Dr. Michael Griffin, DOD

Dear Drs. Droegemeier, Collins, Córdova, Fall, and Griffin:

As leading science, engineering and international education organizations – representing hundreds of thousands of scientists, engineers and educators around the world – we recognize the need to maintain a balance between an openly collaborative scientific environment and protecting our economic and national security. However, that balance will be compromised if actions are implemented that take an overly broad approach to addressing a critical issue at the forefront today, rather than a more targeted response. Any response should consider the impact on both the overall scientific enterprise and on individual scientists and its development should include the input of the science and engineering community.

Our organizations and members are witnessing an escalating concern among U.S. and international scientists that new policies and procedures under consideration to minimize security risks will have the unintended effect of harming the scientific enterprise. Many scientists—both U.S. citizens and foreign nationals—who properly follow codes of conduct, regulations, policies and laws, may inappropriately be harmed in response to the misconduct and illegal actions of others.

As you know well, for more than half a century, the U.S. has been the undisputed global leader in science and technology. This leadership is due, in large part, to the U.S. ability to attract scientists and students from around the world, who make countless contributions to the global scientific enterprise. Scientific progress and U.S. economic development have been vastly accelerated by bringing international minds together and has helped to drive innovation and discoveries in cancer and genetics, the physics of gravitational waves, advancements in green chemistry, improving food safety, and other significant contributions.

Recent events make clear that scientific integrity and security concerns are compelling the federal government—both Congress and the Executive Branch—to revisit policies and procedures regarding foreign nationals who study, work or collaborate with U.S. scientific and academic institutions.

While we must be vigilant to safeguard research, we must also ensure that the U.S. remains a desirable and welcoming destination for researchers from around the world. Finding the appropriate balance between our nation's security and an open, collaborative scientific environment requires focus and due diligence.

We ask that you consider a wide range of stakeholder perspectives as your agencies work together through the new NSTC Joint Committee on Research Environments to develop policies and procedures that address issues related to international researchers' participation in the U.S. scientific enterprise, and we would welcome the opportunity to work with you.

Thank you for your consideration.
